

## **SNET DG Partners with Stealth Communications Allowing VoIP Carriers Access to SIP Gateway Services on the Voice Peering Fabric™**

New York, NY, June 15<sup>th</sup> , 2005 – **SNET DG** (Diversified Group) and **Stealth Communications** are pleased to announce that **SNET DG** will interconnect with **Stealth's Voice Peering Fabric™** (VPF) as an application services provider to offer VPF members SIP access to Intelligent Network Database Information such as, CNAM, 8XX, and LNP.

"VoIP providers need access to legacy telco database information for calls that interact with the PSTN. By joining the VPF family, **SNET DG** is offering VPF members quick and easy access to the information they need without the complexity and expense of an SS7 network, or handing off database queries to a TDM-based carrier," remarked Suzette Taylor, Business Development Manager at **SNET DG**. "Our service supports the spirit of the VPF, which is to extend the reach of VoIP and help VoIP providers operate more efficiently and therefore, more profitably."

**The Voice Peering Fabric** is a distributed Ethernet network that functions as an exchange or meet-point for VoIP traffic. It is a private voice Internet allowing members to establish peer-to-peer connections in a secure, quality-of-service environment. The VPF Minutes Market and ASP Market allows members to buy and sell services with complete transparency among one another. In addition, the VPF ENUM Registry, the world's first commercially accessible ENUM database, allows VoIP calls to remain within the IP domain on the VPF.

"The VPF welcomes **SNET DG** to the VPF family," said Shrihari Pandit, Founder and CEO of Stealth Communications. "With the launch of our VPF ASP Market, we are fortunate to have an industry leader like **SNET DG** be part of the VPF. The databases and gateway services maintained by **SNET DG** are important elements for VoIP providers and we are glad to have them available for our members."

## About SNET Diversified Group

**SNET DG** is a premier provider of SS7 Intelligent Network and Database services to wireless, wireline, and next-generation communications providers. **SNET DG's** national signaling network provides efficient gateway routing of call set-up and wireless roaming messages, wireless calling name delivery, and LIDB/CNAM, number portability, and toll-free database services. **SNET DG's** service-driven solutions include data gateway services for VoIP providers, subscriber information record storage, SOA Service Bureau, Enhanced Operator Services, and FGD terminations throughout the US, Canada, and Puerto Rico, specializing in the Northeast.
