SUNROCKET JOINS STEALTH COMMUNICATIONS VOICE PEERING FABRIC

Nation's 2nd fastest growing Internet phone service provider will utilize VPF to reduce time-to-revenue and enhance QoS

VIENNA, VA – September 6, 2006 – SunRocket, one of the nation's fastest-growing Internet phone service providers, today announced that it has joined Stealth Communications Voice Peering Fabric (VPF), enabling SunRocket to exchange voice traffic directly with other VoIP providers instead of accruing costly per-minute charges associated with routing customer calls through the Public Switched Telephone Network (PSTN).

The Voice Peering Fabric is the world's largest peering network that continues to add industry leaders to its growing membership roster. As a VPF member, SunRocket will be able to facilitate secure, high-quality voice communications directly with other Member providers and access the VPF's expanding Telephone Number Mapping (ENUM) registry to determine which calls can route directly to other VPF Members.

“Increased participation in VOIP peering by Internet phone service providers will facilitate tremendous efficiency gains and enhance quality of service for customers communicating via internet telephony,” said Mark Fedor, chief technology officer at SunRocket. “As a VPF participant, we look forward to spearheading efforts to develop an open, innovative peering model that offers a viable alternative to the closed, outdated legacy PSTN cost-per-minute peering approach.

VOIP peering continues to emerge as a vital platform for providing end-to-end internet protocol-based calls that allow the internet phone service provider to unlock the full power of IP communications and provide enhanced services in conjunction with traditional telephony services.

“We are ecstatic to have one of the nation's fastest growing residential Internet phone service providers on board to provide valuable muscle and momentum to the Voice Peering Fabric,” said Shrihari Pandit, president and CEO of Stealth Communications. “As SunRocket scales its subscriber base, peering VoIP traffic with other providers

without routing through the traditional phone networks will deliver significant benefits to the company by reducing time-to-revenue and enhancing QoS for their customers.”

About SunRocket

Headquartered in Vienna, Virginia, SunRocket, the “no gotcha” phone company, is bringing Internet phone service to mainstream America with the nation’s first full-year, flat-rate home phone package. SunRocket is the only company to offer complete Internet phone service at an all-inclusive, annual price of \$199, with no hidden charges, termination penalties or “gotchas.” SunRocket makes it easy for households with high-speed Internet access to take advantage of the incredible value and enhanced capabilities of state-of-the-art Internet telephony. For more information about this privately held corporation, see the company’s web site at www.SunRocket.com.
