The Voice Peering Forum Summer 2008 Announcement

New York, NY, April 15, 2008 – Stealth Communications, owner and operator of the Voice Peering Fabric (VPF), is pleased to formally announce the Voice Peering Forum Summer 2008. The Forum will be held on June 23-24 2008 at Hotel Nikko San Francisco.

The Voice Peering Forum, a biannual conference, brings together over one hundred unique organizations from all segments of the information technology and telecommunications industry to discuss the latest in business and technology of peering networks and applications.

"The Summer 2008 Forum will mark our 4th year of organizing the conference." said Shrihari Pandit, President & CEO, Stealth Communications. "This event in particular will examine the new thinking and strategies of telecom organizations, as various industries such as Web, Media and Telecom intersect."

The Forum features lively cross-sectional talks, short and high-impact presentations and case studies outlining the challenges, benefits and successes that arise from peering and interconnection deployments including market analysis of interconnect platforms and applications.

"From a bottom line business perspective, Voice Peering Forum Winter 2007 was hands down the most productive conference I attended last year." said Patrick Murphy, COO, The Thomas Howe Company, a leading professional services firm focusing on voice mashups and communications enabled business processes [CEBP], and is widely recognized as one of the most influential firms in VoIP.

"The voice over IP market is booming, the Voice Peering Forums provide us with a great opportunity to discuss the different topics with a right set of players in a good size and focused environment." commented Carlos Da Silva, Director of Marketing Americas, Orange international wholesale solutions.

Attendees of the Forum have an opportunity to pre-schedule meetings through an online meeting scheduler and participate in on-site bilateral and multilateral discussions.

For further information on the Forum, to participate, and to watch videos from the previous Forum, please visit <http://www.voicepeeringforum.com> or call +1-212-232-2020.

About Stealth Communications

Based in New York City, Stealth Communications specializes in peering and interconnection services for the communications industry. Stealth's "Route at Layer-2" service model promotes simplicity, speed and security by moving voice, video and data traffic between organizations in a peer-to-peer fashion.
